# Digital servoproportional directional valves sleeve execution

direct, with on-board driver, LVDT transducer and zero spool overlap with fail safe

DLKZOR-TES-SN-BC-160

① Valve body
② Spool
③ Sleeve
④ Proportional solenoid
⑤ LVDT transducer
⑥ On-board digital driver
⑦ Bluetooth/USB connection
⑧ Fieldbus connector
⑨ Main connector

DLHZO-TEB, DLHZO-TES
DLKZOR-TEB, DLKZOR-TES

Digital servoproportional directional valves, direct, in sleeve execution with LVDT position transducer and zero spool overlap for best performances in any position closed loop control.

TEB basic execution with analog reference signal or IO-Link interface for digital reference signals, valve settings, and real-time diagnostics.

TES full execution which includes also optional alternated p/Q controls and fieldbus interfaces for digital reference signals, valve settings, and real-time diagnostics.

Bluetooth/USB connection is always present for valve settings via mobile App and Atos PC software.

Digital TEZ version (see tech. table FS610) integrates on-board driver and axis card, while TEB-SN-NP and TES versions can be used in combination with Z-BM-KZ off-board axis card (see tech. table GS340).

DLHZO:
Size: **06** - ISO 4401
Max flow: **70 l/min**
Max pressure: **350 bar**

DLKZOR:
Size: **10** - ISO 4401
Max flow: **130 l/min**
Max pressure: **315 bar**

1 MODEL CODE

| DLHZO | - TES | - SN | - NP | - 0 | 40 | - L | 7 | 3 / * / * / * / * | * / | * |

DLHZO = size 06
DLKZOR = size 10

TEB = basic on-board digital driver
TES = full on-board digital driver

Alternated p/Q controls, see section 8 :
SN = none
Only for TES:
SP = pressure control (1 pressure transducer)
SF = force control (2 pressure transducers)
SL = force control (1 load cell)
IO-Link interface, only for TEB, see section 6 :
NP = Not present   **IL** = IO-Link

Fieldbus interfaces, only for TES, see section 7 :
NP = Not present
BC = CANopen   **EW** = POWERLINK
BP = PROFIBUS DP   **EI** = EtherNet/IP
EH = EtherCAT   **EP** = PROFINET RT/IRT

Valve size ISO 4401:   **0** = 06   **1** = 10

Configuration:

Standard   Option **/B**

40 =

with fail safe configuration 1 or 3

60 =

without fail safe

Spool type, regulating characteristics, see section 16 :

L = linear   **V** = progressive   **T** = not linear **(1)**

D = differential-linear **(1)**   **DT** = differential-not linear **(1)**
P-A = Q,   B-T = Q/2   P-A = Q,   B-T = Q/2
P-B = Q/2, A-T = Q   P-B = Q/2, A-T = Q

(1) Only for configuration **40**

Seals material, see section 15 :

- = NBR
PE = FKM
BT = NBR low temp.

Series number

Damping plate option, see section 11 :
V = plate under the digital driver

Safety options TÜV certified - only for TES **(2)**:
U = safe double power supply
K = safe on/off signals
See section 10

SAFETY CERTIFIED

Bluetooth option, see section 4 :
T = Bluetooth adapter supplied with the valve

Hydraulic options (2):
B = solenoid with on-board digital driver and LVDT transducer at side of port A
Y = external drain

Electronic options (2), not available for TEB-SN-IL:
C = current feedback for pressure transducer 4÷20mA (only for TES-SP, SF, SL)
F = fault signal
I = current reference input and monitor 4÷20mA
Q = enable signal
Z = double power supply (only for TES), enable, fault and monitor signals - 12 pin connector

Fail safe configuration, see section 17 :

1 =   **3** =

Note: select **1** for configuration **60** even without fail safe

Spool size:	**0**(L)	**1**(L)	**1**(V)	**3**(L)	**3**(T)	**3**(V)	**5**(L,T)	**7**(L,T,V,D,DT)
DLHZO =	4	7	12	14	-	20	28	40
DLKZOR =	-	-	-	60	60	-	-	100

Nominal flow (l/min) at Δp 70bar P-T (see section 13)

(2) For possible combined options, see section 20

FS180

2 GENERAL NOTES

Atos digital proportionals valves are CE marked according to the applicable directives (e.g. Immunity and Emission EMC Directive).
Installation, wirings and start-up procedures must be performed according to the general prescriptions shown in tech table **FS900** and in the user manuals included in the E-SW-SETUP programming software.

3 VALVE SETTINGS AND PROGRAMMING TOOLS - see tech. table **GS500**

3.1 Atos CONNECT mobile App

Free downloadable App for smartphones and tablets which allows quick access to valve main functional parameters and basic diagnostic information via Bluetooth, thus avoiding physical cable connection and significantly reducing commissioning time.
Atos CONNECT supports Atos digital valve drivers equipped with E-A-BTH adapter or with built-in Bluetooth. It does not support valves with p/Q control or axis controls.

Bluetooth or USB connection

3.2 E-SW-SETUP PC software

Free downloadable software for PC allows to set all valve functional parameters and to access complete diagnostic information of digital valve drivers via Bluetooth/USB service port.
Atos E-SW-SETUP PC software supports all Atos digital valve drivers and it is available at www.atos.com in MyAtos area.

⚠️ **WARNING: drivers USB port is not isolated!** For E-C-SB-USB/M12 cable, the use of E-A-SB-USB/OPT isolator adapter is highly recommended for PC protection

4 BLUETOOTH OPTION - see tech. table **GS500**

T option adds Bluetooth® connectivity to Atos valve drivers thanks to E-A-BTH adapter, which can be left permanently installed on-board, to allow the Bluetooth connection with the valve drivers at any time. E-A-BTH adapter can also be purchased separately and used to connect with any supported Atos digital product.
Bluetooth connection to the valve can be protected against unauthorised access by setting a personal password. The adapter leds visually indicates the status of valve driver and Bluetooth connection.

⚠️ **WARNING:** for the list of countries where the Bluetooth adapter has been approved, see tech. table **GS500**
T option is not available for the Indian market, so the Bluetooth adapter must be ordered separately.

5 SMART TUNING

Smart tuning allows to adjust the valve dynamic response in order to match different performance requirements.

The valve is provided with 3 factory settings for the spool control:
- **dynamic**   fast response time and high sensitivity for best dynamic performances. Default factory setting for directional valves
- **balanced** average response time and sensitivity suitable for major applications
- **smooth**   attenuated response time and sensitivity to improve control stability in critical applications or in environments with electrical disturbances

Smart tuning setting can be switched from Dynamic (default) to Balanced or Smooth via software or fieldbus; if requested, performances can be further customized directly tuning each single control parameter. For details consult related manuals E-MAN-RI-* and Quickstart, see section 28.
For Response time and Bode diagrams see section 16.

6 IO-LINK - only for **TEB**, see tech. table **GS520**

IO-Link allows low cost digital communication between the valve and machine central unit. The valve is directly connected to a port of an IO-Link master (point-to-point connection) via low-cost unshielded cables for digital reference, diagnostic and settings. The IO-Link master works as a hub exchanging this information with the machine central unit via fieldbus.

7 FIELDBUS - only for **TES**, see tech. table **GS510**

Fieldbus allows valve direct communication with machine control unit for digital reference, valve diagnostics and settings. These execution allow to operate the valves through fieldbus or analog signals available on the main connector.

8 ALTERNATED p/Q CONTROLS - only for **TES**, see tech. table **FS500**

S* options add the closed loop control of pressure (**SP**) or force (**SF** and **SL**) to the basic functions of proportional directional valves flow regulation. A dedicated algorithm alternates pressure (force) depending on the actual hydraulic system conditions.
An additional connector is available for transducers to be interfaced to the valve's driver (1 pressure transducer for SP, 2 pressure transducers for SF or 1 load cell for SL). The alternated pressure control (SP) is possible only for specific installation conditions.
Main 12 pin connector is the same as /Z option plus two analog signals specific for the pressure (force) control.

9 AXIS CONTROLLER - see tech. table **FS610**

Digital servoproportional with on-board electronics **TEZ** include valve's driver plus axis controller, performing position closed loop of any hydraulic actuator equipped with analog, encoder or SSI position transducer. S* option add alternated p/Q control to the basic position ones.
Atos also supplies complete servoactuators integrating servocylinder, digital servoproportional valve and axis controller, fully assembled and tested. For more information consult Atos Technical Office.

10 SAFETY OPTIONS - only for **TES**

Atos range of proportional directional valves, provides functional safety options **/U** and **/K** ,
designed to accomplish a safety function, intended to reduce the risk in process control systems.

They are **TÜV certified** in compliance to **IEC 61508 up to SIL 3 and ISO 13849 up to category 4, PL e**

Safe double power supply, option **/U**: the driver has separate power supplies for logic and solenoids. The safe condition is reached by cutting the electrical supply to solenoids, while electronics remains active for monitoring functions and fieldbus communication, see tech table **FY100**

Safe function via on/off signals, option **/K**: upon a disable command, the driver checks the spool position and it provides an on/off acknowledgement signal only when the valve is in safe condition, see tech table **FY200**

11 DAMPING PLATE OPTION

V option adds a rubber damping plate between the valve and the on-board digital driver to reduce acceleration mechanical stress on electronic components, consequently increasing valve life in applications with high vibrations and shocks. For more information see technical table **G004**.

12 GENERAL CHARACTERISTICS

Assembly position	Any position
Subplate surface finishing to ISO 4401	Acceptable roughness index: Ra ≤ 0,8, recommended Ra 0,4 – Flatness ratio 0,01/100
MTTFd values according to EN ISO 13849	150 years, for further details see technical table P007
Ambient temperature range	**Standard** = -20°C ÷ +60°C **/PE** option = -20°C ÷ +60°C **/BT** option = -40°C ÷ +60°C
Storage temperature range	**Standard** = -20°C ÷ +70°C **/PE** option = -20°C ÷ +70°C **/BT** option = -40°C ÷ +70°C
Surface protection	Zinc coating with black passivation, galvanic treatment (driver housing)
Corrosion resistance	Salt spray test (EN ISO 9227) > 200 h
Vibration resistance	See technical table G004
Compliance	CE according to EMC directive 2014/30/EU (Immunity: EN 61000-6-2; Emission: EN 61000-6-3) RoHS Directive 2011/65/EU as last update by 2015/863/EU REACH Regulation (EC) n°1907/2006

13 HYDRAULIC CHARACTERISTICS - based on mineral oil ISO VG 46 at 50 °C

Valve model	DLHZO												DLKZOR						
Pressure limits [bar]	ports **P**, **A**, **B** = 350; **T** = 210 (250 with external drain /Y) **Y** = 10												ports **P**, **A**, **B** = 315; **T** = 210 (250 with external drain /Y) **Y** = 10						
Spool type and size	L0	L1	V1	L3	V3	L5	T5	L7	T7	V7	D7	DT7	L3	T3	L7	T7	V7	D7	DT7
Nominal flow Δp P-T [l/min] **(1)** Δp= 30 bar	2,5	4,5	8	9	13	18		26			26÷13 **(4)**		40		60			60÷33 **(4)**	
Δp= 70 bar	4	7	12	14	20	28		40			40÷20 **(4)**		60		100			100÷50 **(4)**	
Max permissible flow	8	14	16	30	40	50		70			70÷40 **(4)**		110		130			130÷65 **(4)**	
Leakage **(2)** [cm³/min]	<100	<200	<100	<300	<150	<500	<200	<900	<200	<200	<700	<200	<1000	<400	<1500	<400	<400	<1200	<400
Response time **(3)** [ms]	≤ 10												≤ 15						
Hysteresis	≤ 0,1 [% of max regulation]																		
Repeatibility	± 0,1 [% of max regulation]																		
Thermal drift	zero point displacement < 1% at ΔT = 40°C																		

(1) For different Δp, the max flow is in accordance to the diagrams in section 16.2
(2) Referred to spool in neutral position and 50°C oil temperature
(3) 0-100% step signal
(4) For spool type D7 and DT7 the flow value is referred to single path P-A (A-T) ÷ P-B (B-T) at Δp/2 per control edge

14 ELECTRICAL CHARACTERISTICS

Power supplies	Nominal : +24 V_{DC} Rectified and filtered : V_{RMS} = 20 ÷ 32 V_{MAX} (ripple max 10 % V_{PP})
Max power consumption	50 W
Max. solenoid current	**DLHZO** = 2,6 A **DLKZOR** = 3 A
Coil resistance R at 20°C	**DLHZO** = 3 ÷ 3,3 Ω **DLKZOR** = 2,2 ÷ 2,4 Ω
Analog input signals	Voltage: range ±10 V_{DC} (24 V_{MAX} tolerant) Input impedance: Ri > 50 kΩ Current: range ±20 mA Input impedance: Ri = 500 Ω
Monitor outputs	Output range: voltage ±10 V_{DC} @ max 5 mA current ±20 mA @ max 500 Ω load resistance
Enable input	Range: 0 ÷ 5 V_{DC} (OFF state), 9 ÷ 24 V_{DC} (ON state), 5 ÷ 9 V_{DC} (not accepted); Input impedance: Ri > 10 kΩ
Fault output	Output range: 0 ÷ 24 V_{DC} (ON state > [power supply - 2 V] ; OFF state < 1 V) @ max 50 mA; external negative voltage not allowed (e.g. due to inductive loads)
Pressure/Force transducer power supply (only for SP, SF, SL)	+24V_{DC} @ max 100 mA (E-ATR-8 see tech table **GS465**)
Alarms	Solenoid not connected/short circuit, cable break with current reference signal, over/under temperature, valve spool transducer malfunctions, alarms history storage function
Insulation class	H (180°) Due to the occurring surface temperatures of the solenoid coils, the European standards ISO 13732-1 and EN982 must be taken into account
Protection degree to DIN EN60529	IP66 / IP67 with mating connectors
Duty factor	Continuous rating (ED=100%)
Tropicalization	Tropical coating on electronics PCB
Additional characteristics	Short circuit protection of solenoid's current supply; 3 leds for diagnostic (only for TES); spool position control (SN) or pressure/force control (SP, SF, SL) by P.I.D. with rapid solenoid switching; protection against reverse polarity of power supply
Communication interface	USB Atos ASCII coding	IO-Link Interface and System Specification 1.1.3	CANopen EN50325-4 + DS408	PROFIBUS DP EN50170-2/IEC61158	EtherCAT POWERLINK EtherNet/IP PROFINET IO RT/IRT IEC 61158
Communication physical layer	not insulated USB 2.0 + USB OTG	SDCI class port B	optical insulated CAN ISO11898	optical insulated RS485	Fast Ethernet, insulated 100 Base TX
Recommended wiring cable	LiYCY shielded cables, see section 25				

Note: a maximum time of 800 ms (depending on communication type) has to be considered between the driver energizing with the 24 V_{DC} power supply and when the valve is ready to operate. During this time the current to the valve coils is switched to zero.

SEALS AND HYDRAULIC FLUIDS - for other fluids not included in below table, consult our technical office

Seals, recommended fluid temperature		NBR seals (standard) = -20°C ÷ +60°C, with HFC hydraulic fluids = -20°C ÷ +50°C FKM seals (/PE option) = -20°C ÷ +80°C NBR low temp. seals (/BT option) = -40°C ÷ +60°C, with HFC hydraulic fluids = -20°C ÷ +50°C		
Recommended viscosity		20÷100 mm²/s - max allowed range 15 ÷ 380 mm²/s		
Max fluid contamination level	normal operation	ISO4406 class 18/16/13 NAS1638 class 7		see also filter section at
	longer life	ISO4406 class 16/14/11 NAS1638 class 5		www.atos.com or KTF catalog
Hydraulic fluid		**Suitable seals type**	**Classification**	**Ref. Standard**
Mineral oils		NBR, FKM, NBR low temp.	HL, HLP, HLPD, HVLP, HVLPD	DIN 51524
Flame resistant without water		FKM	HFDU, HFDR	ISO 12922
Flame resistant with water		NBR, NBR low temp.	HFC	

16 **DIAGRAMS** (based on mineral oil ISO VG 46 at 50 °C)

16.1 Regulation diagrams

1 = Linear spools L
2 = Differential - linear spool D7

3 = Differential non linear spool DT7
4 = Non linear spool T5 (only for DLHZO)

5 = Non linear spool T3 (only for DLKZOR) and T7
6 = Progressive spool V

T3, T5 and T7 spool types are specific for fine low flow control in the range from 0 to 60% (T5) and 0 to 40% (T3 and T7) of max spool stroke.
The non linear characteristics of the spool is compensated by the electronic driver, so the final valve regulation is resulting linear respect the reference signal (dotted line).

DT7 has the same characteristic of T7 but it is specific for applications with cylinders with area ratio 1:2

Note:
Hydraulic configuration vs. reference signal:

Standard:
Reference signal $\left.\begin{array}{l}0 \div +10 \text{ V}\\12 \div 20 \text{ mA}\end{array}\right\}$ P → A / B → T

Reference signal $\left.\begin{array}{l}0 \div -10 \text{ V}\\12 \div 4 \text{ mA}\end{array}\right\}$ P → B / A → T

option /B:
Reference signal $\left.\begin{array}{l}0 \div +10 \text{ V}\\12 \div 20 \text{ mA}\end{array}\right\}$ P → B / A → T

Reference signal $\left.\begin{array}{l}0 \div -10 \text{ V}\\12 \div 4 \text{ mA}\end{array}\right\}$ P → A / B → T

16.2 Flow /Δp diagrams
Stated at 100% of spool stroke

DLHZO:
1 = spool L7, T7, V7, D7, DT7
2 = spool L5, T5
**3** = spool V3
4 = spool L3
5 = spool L1, V1
6 = spool L0

DLKZOR:
7 = spool L7, T7, V7, D7, DT7
8 = spool L3, T3

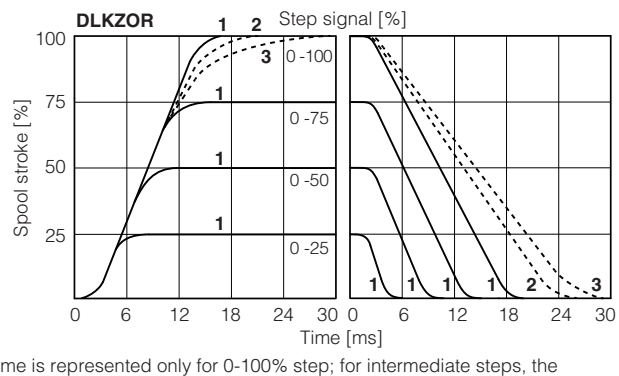

Valve pressure drop Δp [bar]

16.3 Pressure gain

Spool stroke [%]
16.4 Response time
The response times in below diagrams are measured at different steps of the reference input signal. They have to be considered as average values.

1 = dynamic   **2** = balanced (*)   **3** = smooth (*)

(*) Response time is represented only for 0-100% step; for intermediate steps, the response time increment of presets 2 (balanced) and 3 (smooth) with respect to the preset 1 (dynamic) is proportional to the step amplitude of the reference input signal

16.5 DLHZO Bode diagrams
Stated at nominal hydraulic conditions

± 5% nominal stroke:
1 = dynamic
2 = balanced
3 = smooth

± 100% nominal stroke:
4 = dynamic
5 = balanced
6 = smooth

Frequency [Hz]
16.6 DLKZOR Bode diagrams
Stated at nominal hydraulic conditions

± 5% nominal stroke:
1 = dynamic
2 = balanced
**3** = smooth

± 100% nominal stroke:
4 = dynamic
5 = balanced
6 = smooth

Frequency [Hz]

FS180
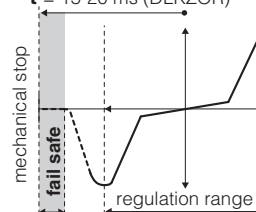

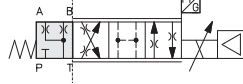

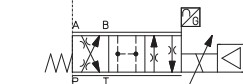

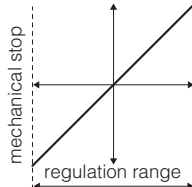

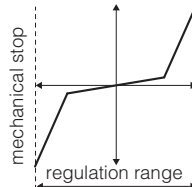

17 FAIL SAFE POSITION

CONFIGURATION	LINEAR	NOT LINEAR
fail safe **1** fail safe **3** without fail safe	**t** = 7-10 ms (DLHZO) **t** = 15-20 ms (DLKZOR)	**t** = 7-10 ms (DLHZO) **t** = 15-20 ms (DLKZOR)

t = time required by the valve to switch from central to fail safe position at the power switch-off, with pressure 0 to 100 bar

Fail safe connections		**P → A**	**P → B**	**A → T**	**B → T**
Leakage [cm³/min] at P = 100 bar **(1)**	Fail safe 1	50	70	70	50
	Fail safe 3	50	70	-	-
Flow [l/min] **(2)** DLHZO / DLKZOR	Fail safe 3	-	-	15÷30	10÷20
		-	-	40÷60	25÷40

(1) Referred to spool in fail safe position and 50°C oil temperature   **(2)** Referred to spool in fail safe position at Δp = 35 bar per edge

18 HYDRAULIC OPTIONS

B = Solenoid, on-board digital driver and position transducer at side of port A of the main stage. For hydraulic configuration vs reference signal, see 16.1

Y = This option is mandatory if the pressure in port T exceeds 210 bar.

19 ELECTRONIC OPTIONS - not available for **TEB-SN-IL**

F = This option permits to monitor the eventual fault condition of the driver, as for example the solenoid short circuit/not connected, reference signal cable broken for option /I, spool position transducer broken, etc. - see 21.9 for signal specifications.

I = This option provides 4 ÷ 20 mA current reference and monitor signals, instead of the standard ±10 VDC.
Input signal can be reconfigured via software selecting between voltage and current, within a maximum range of ±10 VDC or ±20 mA.
It is normally used in case of long distance between the machine control unit and the valve or where the reference signal can be affected by electrical noise; the valve functioning is disabled in case of reference signal cable breakage.

Q = This option permits to inhibit the valve function without removing the power supply to the driver. Upon disable command the current to the solenoid is zeroed and the valve's spool moves to rest position.
The option /Q is suggested for all cases where the valve has to be frequently inhibited during the machine cycle – see 21.7 for signal specifications.

Z = This option provides, on the 12 pin main connector, the following additional features:
Fault output signal - see above option **/F**
Enable input signal - see above option **/Q**
Repeat enable output signal - only for **TEB-SN-NP** (see 21.8)
Power supply for driver's logics and communication - only for **TES** (see 21.2)

C = This option is available to connect pressure (force) transducers with 4 ÷ 20 mA current output signal, instead of the standard ±10 VDC.
Input signal can be reconfigured via software selecting between voltage and current, within a maximum range of ±10 VDC or ±20 mA.

20 POSSIBLE COMBINED OPTIONS

Standard versions for **TEB-SN-NP** and **TES-SN**:
/BF, /BFI, /BFIY, /BFY, /BI, /BIQ, /BIQY, /BIY, /BIYZ, /BIZ, /BQ, /BQY, /BY, /BYZ, /BZ,
/FI, /FIY, /FY,
/IQ, /IQY, /IY, /IYZ, /IZ,
/QY, /YZ

Standard versions for **TEB-SN-IL**:
/BY

Standard versions for **TES-SP, SF, SL**:
/BC, /BCI, /BCIY, /BCY, /BI, /BIY, /BY,
/CI, /CIY, /CY,
/IY

Safety certified versions for **TES-SN**:
/BI/U, /BIY/U, /B/U, /BY/U, /I/U, /IY/U, /Y/U
/BI/K, /BIY/K, /B/K, /BY/K, /I/K, /IY/K, /Y/K

Safety certified versions for **TES-SP, SF, SL**:
/BC/U, /BCI/U, /BCIY/U, /BCY/U, /BI/U, /BIY/U, /B/U, /BY/U,
/C/U, /CI/U, /CIY/U, /CY/U, /I/U, /IY/U, /Y/U
/BC/K, /BCI/K, /BCIY/K, /BCY/K, /BI/K, /BIY/K, /B/K, /BY/K,
/C/K, /CI/K, /CIY/K, /CY/K, /I/K, /IY/K, /Y/K

Note: **/T** Bluetooth adapter option and **/V** damping plate option can be combined with all other options

21 POWER SUPPLY AND SIGNALS SPECIFICATIONS

Generic electrical output signals of the valve (e.g. fault or monitor signals) must not be directly used to activate safety functions, like to switch-ON/OFF the machine's safety components, as prescribed by the European standards (Safety requirements of fluid technology systems and components-hydraulics, ISO 4413).

For **TEB-SN-IL** signals see section 22
For certified safety options: **/U** see tech. table **FY100** and **/K** see tech. table **FY200**

21.1 Power supply (V+ and V0)

The power supply must be appropriately stabilized or rectified and filtered: apply at least a 10000 µF/40 V capacitance to single phase rectifiers or a 4700 µF/40 V capacitance to three phase rectifiers. In case of separate power supply see 21.2.

⚠ A safety fuse is required in series to each power supply: 2,5 A time lag fuse.

21.2 Power supply for driver's logic and communication (VL+ and VL0) - only for **TES** with **/Z** option and for **TES-SP, SF, SL** with fieldbus

The power supply for driver's logic and communication must be appropriately stabilized or rectified and filtered: apply at least a 10000 µF/40 V capacitance to single phase rectifiers or a 4700 µF/40 V capacitance to three phase rectifiers.
The separate power supply for driver's logic on pin 9 and 10, allow to remove solenoid power supply from pin 1 and 2 maintaining active the diagnostics, USB and fieldbus communications.

⚠ A safety fuse is required in series to each driver's logic and communication power supply: 500 mA fast fuse.

21.3 Flow reference input signal (Q_INPUT+)

The driver controls in closed loop the valve spool position proportionally to the external reference input signal.
Reference input signal is factory preset according to selected valve code, defaults are ±10 V_{DC} for standard and 4 ÷ 20 mA for /I option.
Input signal can be reconfigured via software selecting between voltage and current, within a maximum range of ±10 V_{DC} or ± 20 mA.
Drivers with fieldbus interface can be software set to receive reference signal directly from the machine control unit (fieldbus reference).
Analog reference input signal can be used as on-off commands with input range 0 ÷ 24V_{DC}.

21.4 Pressure or force reference input signal (F_INPUT+) - only for **TES-SP, SF, SL**

Functionality of F_INPUT+ signal (pin 7), is used as reference for the driver pressure/force closed loop (see tech. table **FS500**).
Reference input signal is factory preset according to selected valve code, defaults are ±10 V_{DC} for standard and 4 ÷ 20 mA for /I option.
Input signal can be reconfigured via software selecting between voltage and current, within a maximum range of ±10 V_{DC} or ± 20 mA.
Drivers with fieldbus interface can be software set to receive reference signal directly by the machine control unit (fieldbus reference).
Analog reference input signal can be used as on-off commands with input range 0 ÷ 24V_{DC}.

21.5 Flow monitor output signal (Q_MONITOR) - not for **/F**

The driver generates an analog output signal proportional to the actual spool position of the valve; the monitor output signal can be software set to show other signals available in the driver (e.g. analog reference, fieldbus reference, pilot spool position).
Monitor output signal is factory preset according to selected valve code, defaults are ±10 V_{DC} for standard and 4 ÷ 20 mA for /I option.
Output signal can be reconfigured via software selecting between voltage and current, within a maximum range of ±10 V_{DC} or ± 20 mA.

21.6 Pressure or force monitor output signal (F_MONITOR) - only for **TES-SP, SF, SL**

The driver generates an analog output signal proportional to alternated pressure/force control; the monitor output signal can be software set to show other signals available in the driver (e.g. analog reference, force reference).
Monitor output signal is factory preset according to selected valve code, defaults are ±10 V_{DC} for standard and 4 ÷ 20 mA for /I option.
Output signal can be reconfigured via software selecting between voltage and current, within a maximum range of ±10 V_{DC} or ± 20 mA.

21.7 Enable input signal (ENABLE) - not for standard and **/F**

To enable the driver, supply a 24 V_{DC} on pin 3 (pin C): Enable input signal allows to enable/disable the current supply to the solenoid, without removing the electrical power supply to the driver; it is used to active the communication and the other driver functions when the valve must be disabled for safety reasons. This condition **does not comply** with norms IEC 61508 and ISO 13849.
Enable input signal can be used as generic digital input by software selection.

21.8 Repeat enable output signal (R_ENABLE) - only for **TEB-SN-NP** with **/Z** option

Repeat enable is used as output repeater signal of enable input signal (see 21.7).

21.9 Fault output signal (FAULT) - not for standard and **/Q**

Fault output signal indicates fault conditions of the driver (solenoid short circuits/not connected, reference signal cable broken for 4 ÷ 20 mA input, spool position transducer cable broken, etc.). Fault presence corresponds to 0 V_{DC}, normal working corresponds to 24 V_{DC}.
Fault status is not affected by the Enable input signal. Fault output signal can be used as digital output by software selection.

21.10 Remote pressure/force transducer input signal - only for **TES-SP, SF, SL**

Analog remote pressure transducers or load cell can be directly connected to the driver (see 23.5).
Analog input signal is factory preset according to selected valve code, defaults are ±10 V_{DC} for standard and 4 ÷ 20 mA for /C option.
Input signal can be reconfigured via software selecting between voltage and current, within a maximum range of ±10 V_{DC} or ± 20 mA.
Refer to pressure/force transducer characteristics to select the transducer type according to specific application requirements (see tech table **FS500**).

21.11 Multiple PID selection (D_IN0 and D_IN1) - only **NP** execution for **TES-SP, SF, SL**

Two on-off input signals are available on the main connector to select one of the four pressure (force) PID parameters setting, stored into the driver.
Switching the active setting of pressure PID during the machine cycle allows to optimize the system dynamic response in different hydraulic working conditions (volume, flow, etc.).
Supply a 24 V_{DC} or a 0 V_{DC} on pin 9 and/or pin 10, to select one of the PID settings as indicated by binary code table at side. Gray code can be selected by software.

	PID SET SELECTION			
PIN	SET 1	SET 2	SET 3	SET 4
9	0	24 V_{DC}	0	24 V_{DC}
10	0	0	24 V_{DC}	24 V_{DC}

22.1 Power supply for IO-Link communication (L+ and L-)

The IO-Link master provides dedicated 24 VDC power supply for IO-Link communication.
Maximum power consumption: 2 W
Internal electrical isolation of power L+, L- from P24, N24

22.2 Power supply for driver's logic and valve regulation (P24 and N24)

The IO-Link master provides dedicated 24 VDC power supply for valve regulation, logics and diagnostics.
Maximum power consumption: 50 W
Internal electrical isolation of power P24, N24 from L+, L-

22.3 IO-Link data line (C/Q)

C/Q signal is used to establish communication between IO-Link master and valve.

23 ELECTRONIC CONNECTIONS

For electronic connection of certified safety options **/U** see tech. table **FY100** and **/K** see tech. table **FY200**

23.1 Main connector signals - 7 pin (A1) **Standard**, **/Q** and **/F** options

PIN	Standard	/Q	/F	TECHNICAL SPECIFICATIONS	NOTES

24 **IN / OUT FIELDBUS COMMUNICATION CONNECTORS**

Two fieldbus communication connectors are always available for digital drivers executions BC, BP, EH, EW, EI, EP. This features allows considerable technical advantages in terms of installation simplicity, wirings reduction and also avoid the usage expensive T-connectors.
For BC and BP executions the fieldbus connectors have an internal pass-through connection and can be used like end point of the fieldbus network, using an external terminator (see tech table **GS500**).
For EH, EW, EI and EP executions the external terminators are not required: each connector is internally terminated.

BC and BP pass-through connection
25 **CONNECTORS CHARACTERISTICS** - to be ordered separately

25.1 Main connectors - 7 pin

CONNECTOR TYPE	POWER SUPPLY AND SIGNALS	POWER SUPPLY AND SIGNALS
